

TECHNICAL DOCUMENT MANAGEMENT with *T-Plan Manager*[®]

T-Plan Manager is a Technical Document Management and general purpose software, flexible and mainly... easy to use, with a fast implantation in the company.

The every day major requirements of improving the productivity and the quality, as way of reducing the costs and of be imposing on a market increasingly competitively, do imperative that the companies concentrate their attention in the need to incorporate new procedures of work orientated to organizing the general documentation and specifically that one of technical character. This product offers a real environment of work in group and of cooperation in the company.

The companies of engineering, construction, transformation, etc. They generate and support all their productive processes with technical, mercantile documentation, etc. That will have to share the different departments of the company. All this documentation in which the production of the company is sustained, constitutes the major patrimony of the same one. Of there, the importance of taking care of aspects as the safety, integrity, control of versions, facility and rapidity in the search of documents for all those who have to share the above mentioned information, good is for production, supervision, approval, modification or simply for consults. As response to this current need, [Rastertech España](#) has developed a software of Management for technical documentation and of work in group. This is a solution of high technological level, high benefits and low cost, to which a great ease of use is added that is a characteristic very important to ensure the success of the implantation in the company also constitutes the adapted solution better for the companies that take refuge in the norms of quality ISO 9001 applicable to the processes of design, development, production, installation and service. The certification to this norm, recommends the implantation of a system of documentary management with control of revisions and phases of work like which it offers *T-Plan Manager*

Searching documents in the archive

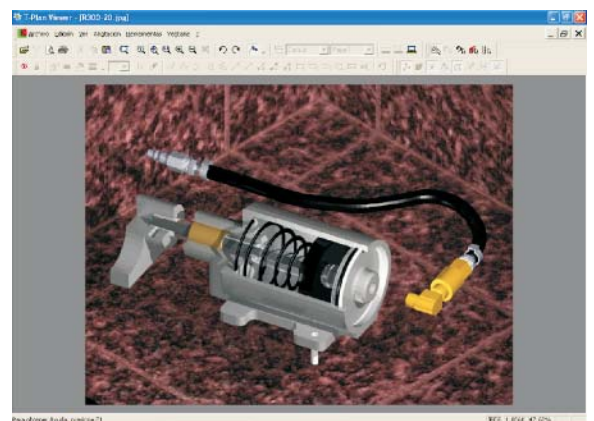

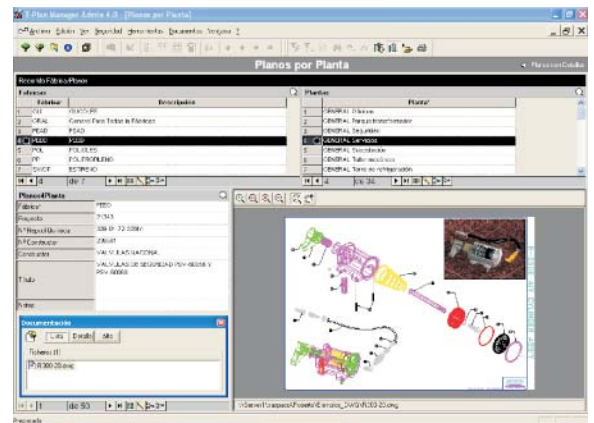

The information is organized according to the specific requirements of every company. To search and locate any document in an easy and intuitive form, there exists a procedure of **Assisted Search** and other one of **Query By Example** with multiple relational operators to establish the criteria of search. The system being allowed to parametrize for queries been realized from external programs.

Viewing and printing: T-Plan Viewer[®]

One of the most important characteristics for a Document Management System is to allow the visualization of any document and the obtaining of printed copies, without need to resort to the native software that generated it, but with the same capacities that this. This way, TPlan Viewer[®] (viewing module of **TPlan Manager**[®]) supports multiple formats of documents: vector 2D and 3D, ráster B/W and color, office computer, etc. Incorporating simultaneously diverse tools to operate with the image on screen, as: zoom, pan, mirror, change of screen background, layers, files of external reference, etc. Also it will allow you to measure lines and polylines, WYSIWYG preview, adjustment of margins, of scale, fit to paper(role), to stamp(print) the whole document or only a detail of the same one, to stamp(print) only selected paper, print the whole document or only a detail of the same one, print only selected layers, to use configurations of pens for AutoCAD[®]'s drawings, etc.

Overprint

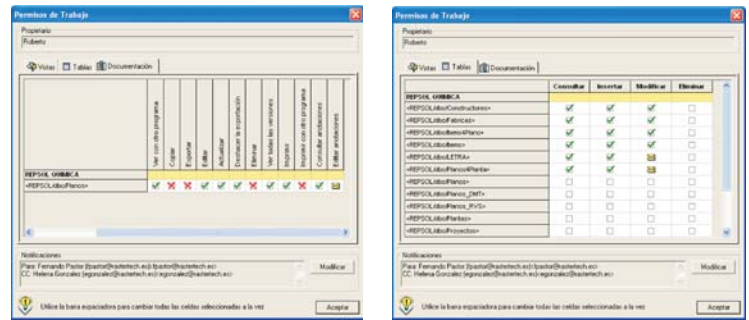

When printing documents, it is possible to establish the overprint of a predetermined text, as for example: " controlled Copy produced by[user's name] in date [dd/mm/aa] ", with specified format and position

Security

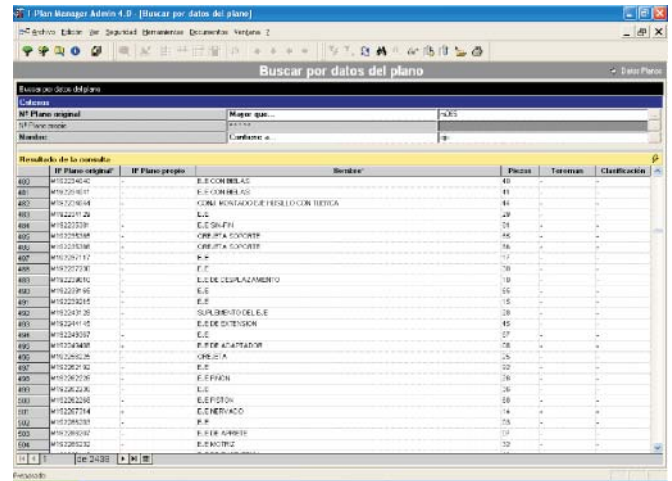

Access to the archive is restricted to authorized and identified users by means of password. It is possible to define different user profiles and different user groups, with different levels of work permission that enable to: only query, obtaining printed copies, export to external programs for editing purposes, query and viewing of "red-line".

Restriction of access to specific documents in the file and associated specific information to documents.

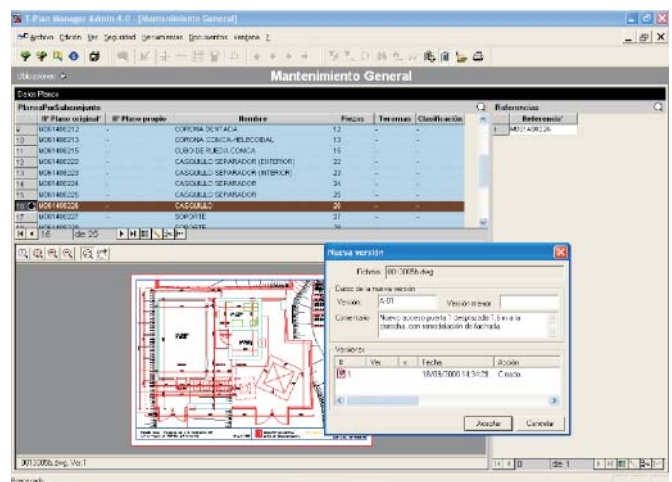

Notifications

It is made possible to create official notices with predetermined contents, that will take place of automatic form as a result of certain chosen actions and they will be transmitted by the electronic mail to addressees also predetermined. For example, you can receive a customized message of mail whenever some user makes a revision of some file, whenever the associated data are modified, whenever a file registers, ...

Statistic of file and reports:

Printed statistical summaries in form of listing with contents of the file under any criterion of single classification and with the data can be obtained that are desired to brief.

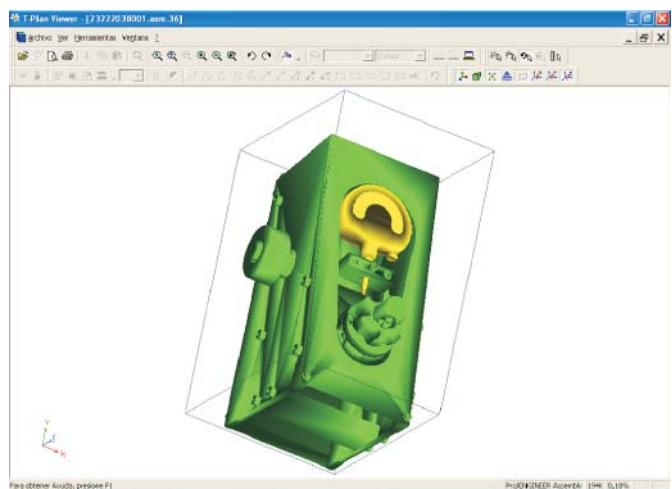

Management of Revisions

T-Plan Manager® at any moment guarantees the filed document integrity. When an authorized user to publish documents, must make a modification, exports the document in screen of automatic form to any program where he can publish it and whenever he does it, he will control the new versions that take place, maintaining an historical one of the same ones.

Control of phases

Possibility of creating official notices with predetermined contents, that will take place of automatic form as a result of certain chosen actions and they will be transmitted by the electronic mail to addressees also predetermined are possible to be obtained printed statistical summaries in form of listing with contents of the file under any criterion of single classification and with the data that are desired to brief.
